Los Angeles Clippers Arena (Intuit Dome) Store Analysis
Fall 2025 Data Challenge
Prepared by Oluwaseyi Caleb Folorunso

- *Summary*

This analysis leverages transaction, foot traffic and customer spending data from three NBA Playoff games versus the Denver Nuggets, held at the Intuit Dome, home of the Los Angeles Clippers. By linking foot traffic to transaction activity, I was able to identify when and where sales peak, which product verticals are more lucrative, and how conversion can be improved.

- *Datasets Used*
  - LA Clippers Fall 2025 Business Insights Data Challenge Dataset–Excel document of data collected on 4/24, 4/26 and 05/01 (2025) comprising several worksheets including *Retail+F&B*, *StoreEntries*, *CustomerIDs* and *StoreNames*.

- *Key Findings*

***Insight 1**–Peaks and Lows*

Sales across the majority of the venue's stores tend to peak between the hours of 6 and 8 PM Pacific Time, afterward there is a steep decline around 9PM as seen in *Figure 1*. The transaction chart shows that game-day foot traffic and customer spending, as a result, are heavily front-loaded.

***Insight 2**–Food vs. Retail*

Majority of the revenue across all stores is generated by the purchase of food items rather than merchandise. Within the stores that identify as both Concessions & Retail, 99% of total earnings, out of a whopping $700,000, come from food & beverages alone (*Figure 2*). In contrast, these same stores only account for about $5300 spent on retail items. The singular retail stores, however, do report about $420,000+ on earnings but nevertheless, the provisions still come out on top (*Figure 2*).

- *Business Recommendation*

In order to maximize both F&B and retail revenue, enhancing the availability of concessions and its conversion during peak hours is most necessary. One way to effectively impact the conversion could be through mobile ordering for food and beverages and/or introducing loyalty and bundle deals for merchandise pre-game and pre-halftime. This way congestion is reduced during the demand surge for maximum food sales, as they are also being made ahead of time, and the bundle deals encourage fans to attend more games and also buy more merchandise every arena visit. Businesses could also introduce "After-the-Fourth" promotion deals to improve poor post-game sales.
